Professional Summary

I'm a self-taught full-stack developer with a background in retail and communication, now focused on building practical, user-friendly web and mobile apps. I enjoy working across the stack—from designing clean frontends in React or Angular to building solid backends with Node.js and Express. I'm currently freelancing and always learning, whether it's through real-world projects or staying on top of new tech trends.

Technical Skills
• Languages: JavaScript, TypeScript, PHP
• Frameworks & Libraries: Angular, React, Ionic, Node.js, Express.js
• Databases: MongoDB, MySQL
• Tools & Practices: Git, Electron, CI/CD, REST APIs

Projects

Bonny Official (*Ongoing* https://bonny-official.com)
Building a feature-rich artist portfolio site for Nigerian musician Bonny to showcase her music, biography, and press features. Although my core strength is in Angular, I took on the challenge of developing the frontend in **React**, which pushed me to adapt quickly and learn new concepts in component-driven UI development. The backend is powered by **Node.js**, with a custom CMS built from scratch to manage dynamic content, events, and media. The project also emphasizes responsive design and user experience across mobile and desktop.

The Property Experts (https://property-xperts.com)
Developed a full-featured real estate listing platform using a **PHP/Laravel** script, despite having a background rooted more in JavaScript frameworks. I had to get up to speed with Laravel conventions, templating, and database migrations to customize the platform for Nigerian property agents and users. Features include dynamic property filtering, agent management, a content blog, and admin tools. The project pushed me to learn quickly and deliver a responsive, SEO-friendly experience that works well across devices.

ADR Inventory Application
ADR Inventory was built specifically for small to medium-sized businesses to streamline their operations to help in record keeping to minimize error and data manipulation.

- Designed and developed cross-platform inventory management systems (web + desktop) tailored for SMEs.
- Improved inventory tracking accuracy and business efficiency.
- **Tech Stack:** Angular, Node.js, MySQL, Electron.

Professional Experience

Freelance Full Stack Developer

Self-Employed | Sept 2023 – Present

• Built and deployed full-stack solutions using MongoDB, Express.js, Angular, and Ionic.

• Delivered ADR Inventory tools to help businesses manage stock and operations.

• Handled end-to-end product cycles: client engagement, architecture, development, and deployment.

Ionic Angular Developer

Ventis Inc | Jul 2023 – Sept 2023

• Developed responsive, cross-platform applications using Ionic and Angular.

• Worked closely with design and backend teams for seamless UI/UX and functionality.

• Optimized performance and maintainability through modular code practices.

Retail Sales Manager

Radiant Amore Services | Nov 2017 – Nov 2022

• Led retail operations including inventory control, sales forecasting, and marketing.

• Managed customer experience strategies and trained staff on sales techniques.

Classroom Teacher (NYSC)

Green Pasture Group of Schools | Nov 2015 – Oct 2016

• Taught and mentored students in diverse classrooms.

• Organized extracurricular activities to enhance student engagement.
